Academic appointments

2020 – 2021 **GLOBE senior postdoctoral researcher**, *cosmological structure formation*, University of Edinburgh, Catherine Heymans.

2017 – 2020 **Marie Skłodowska Curie Fellowship**, *weak lensing*, University of Barcelona and University of British Columbia, Licia Verde and Ludovic Van Waerbeke.

2015 – 2017 **Canadian Institute of Theoretical Astrophysics National Fellowship**, *weak lensing*, University of British Columbia, Ludovic Van Waerbeke.

2014 – 2015 **Postdoctoral fellow**, *baryonic feedback, matter clustering, weak lensing*, University of Edinburgh, Catherine Heymans.

Education

2010 – 2014 **PhD**, *Demographics of dark-matter haloes in standard and non-standard cosmologies*, University of Edinburgh, John Peacock.

2005 – 2010 **MPhys**, *astrophysics and theoretical physics*, University of Oxford, first class, Millard Exhibition, Trinity scholarship.

Awards

2016 **Marie Skłodowska Curie Fellowship**, *UBC and Barcelona*.

2015 **CITA National Fellowship**, *UBC and CITA*.

2012 **Vitae Postgraduates Who Tutor Award (nomination)**, *Edinburgh*.

2012 **Teach First Innovative Teaching Award (nomination)**, *Edinburgh*.

2010 **STFC funded PhD position**, *Edinburgh*.

2010 **Peter Fisher prize**, *top results in college*, Oxford.

2009 **Trinity College Scholarship**, *first-class results in exams*, Oxford.

PhD thesis

Title *Demographics of dark-matter haloes in standard and non-standard cosmologies*

Supervisors John Peacock, Alan Heavens, Sylvain de la Torre, Lucas Lombriser

Description (1) Tuning the halo model of structure formation to accurately predict the full non-linear matter power spectrum as a function of cosmological parameters. (2) Rescaling cosmological simulations, in terms of both matter distributions and halo catalogues, between cosmological models. (3) Rescaling simulations from standard to modified gravity models.

Research interests

Cosmology I have a strong background in fundamental cosmology with particular knowledge of the theory of structure formation including both the perturbative and deeply non-linear regime via the halo model. I am interested in how the halo model can be extended to better model the statistical properties of the density field when considering dark energy (DE) and modified gravity (MG) scenarios and accounting for baryons and how halo biasing can be included self consistently.

Simulations I am experienced in using GADGET-2 to perform cutting-edge, multi-core simulations. I have modified GADGET-2 to include a dark energy component and I am interested in simulations of both DE and MG models, but particularly in how to *avoid* running large numbers of simulations by applying better theoretical modelling to simulation output, particularly by rescaling between different cosmological models. Over the course of my career I have developed a large library of software to analyse the output of simulations and to generate and analyse halo catalogues produced by simulations.
